

TREATING IMMUNOLOGICAL DISORDERS USING AGONISTS OF INTERLEUKIN-21/ INTERLEUKIN-21 RECEPTOR

ABSTRACT

Methods and compositions for modulating interleukin-21 (IL-21)/IL-21 receptor (MU-1) activity using agonists of IL-21 or IL-21 receptor (“IL-21R” or “MU-1”), are disclosed. IL-21/IL-21R agonists can be used by themselves or in combination with anti-inflammatory agents to treat, e.g., ameliorate, symptoms associated with immunological disorders of the nervous system, e.g., multiple sclerosis.
